

Sasho Nedelkoski

sashonedelkoski@gmail.com

Summary

My interest in both research and engineering is machine learning for software engineering. My research focus lies in developing generative models for code, anomaly detection models for natural language data, whereas my engineering focus is on development of end-to-end ML systems for software data (code and observability) to support various software development tasks.

Education

| | | |
|-----------------|--------------------------------|---------------------------|
| Berlin, Germany | Technical University of Berlin | October 2018 – April 2021 |
|-----------------|--------------------------------|---------------------------|

- **Ph.D. in Computer Science** (grade: summa cum laude), supervised by Prof. Dr. Odej Kao
- Thesis title: “Deep Anomaly Detection in Distributed Software Systems”

| | | |
|-----------------|--------------------------------|-------------------------------|
| Berlin, Germany | Technical University of Berlin | October 2017 – September 2018 |
|-----------------|--------------------------------|-------------------------------|

- **M.Sc. in Computer Science** (GPA: 1.0 German grading system)
- Thesis title: “Event-generated Time Series Anomaly Detection using Deep Learning”
- Best student awards from VDI & TU Berlin, and best master thesis

| | | |
|-------------------|------------------------------------|----------------------------|
| Skopje, Macedonia | Ss. Cyril and Methodius University | September 2013 – June 2017 |
|-------------------|------------------------------------|----------------------------|

- **B.Sc. in Computer Technologies and Engineering** (GPA: 9.93/10.0 Macedonian grading system)
- Thesis title: “Lung Cancer Detection using Deep Learning”
- Best student award (2013/2014, 2014/2015, 2015/2016 and 2016/2017 academic year)

Work experience

| | | |
|-----------------------------|-------------|-----------------------|
| Chief Data Scientist | logsight.ai | August 2021 – Present |
|-----------------------------|-------------|-----------------------|

- Developed end-to-end machine learning system incl. data ingestion, processing pipeline, and visualization
- Developed system-agnostic NLP model for anomaly detection in software application logs
- Implemented data differentiation method that is primarily used for software verification

| | | |
|---------------------------|-------------------------------|------------------------|
| Research Associate | Technische Universität Berlin | October 2017 – present |
|---------------------------|-------------------------------|------------------------|

- Performed research and development on anomaly detection, distributed systems reliability, and learning from heterogeneous data
- Worked on various ML projects building end-to-end tools funded from Huawei, Berlin Big Data Center, and BIFOLD
- Responsible for teaching of seminars and projects

Skills

Programming languages and frameworks

- Python, PyTorch, Python Analytics Stack, MLFlow, Git, Kotlin, Spring Boot, Kafka, ELK, Docker

Languages

- English (full professional proficiency), Macedonian (native), German (A2), Serbo-Croatian (professional proficiency), Spanish (limited working proficiency)

Research

Competitions

- Kaggle Quora Question Pairs (May 2017) – *Gold medal*, top 0.3%. Developed complex ensemble of machine learning models (multiple deep learning and tree boosting methods)
- Kaggle Data Science Bowl 2017– Lung Cancer Detection (April 2017) – *Silver medal*, top 4%. Using thousands of high-resolution lung scans developed ensemble of deep learning models that determine when lesions in the lungs are cancerous
- Kaggle Bosch Production Line Performance (November 2016) – *Silver medal*, top 3.6%. Developed solution using ensembles and gradient boosting
- Kaggle Predicting Red Hat Business Value (September 2016) – *Silver medal*, top 1.6%. Solution using ensembles and gradient boosting.
