Summary

My interest in both research and engineering is the intersection between machine learning and software systems. My research focus lies in temporal and natural language data, whereas my engineering focus lately is on end-to-end ML systems to support various development tasks.

Education

Berlin, Germany	Technical University of Berlin	October 2018 – April 2021
<ul style="list-style-type: none">• Ph.D. in Computer Science (grade: summa cum laude), supervised by Prof. Dr. Odej Kao• Thesis: “Deep Anomaly Detection in Distributed Software Systems”		
Berlin, Germany	Technical University of Berlin	October 2017 – September 2018
<ul style="list-style-type: none">• M.Sc. in Computer Science (GPA: 1.0 German grading system)• Thesis: “Event-generated Time Series Anomaly Detection using Deep Learning”• Best student awards from VDI & TU Berlin, and best master thesis from TU Berlin		
Skopje, Macedonia	Ss. Cyril and Methodius University	September 2013 – June 2017
<ul style="list-style-type: none">• B.Sc. in Computer Technologies and Engineering (GPA: 9.93/10.0 Macedonian grading system)• Thesis: “Lung Cancer Detection using Deep Learning”• Best student award (2013/2014, 2014/2015, 2015/2016 and 2016/2017 academic year)		

Work experience

Senior Data Scientist	CARIAD SE (Volkswagen group)	April 2023 – present
<ul style="list-style-type: none">• Intrusion detection systems• Developing methods for security related anomaly detection on petabyte data scale		
Senior/Lead Data Scientist	logsight.ai	February 2021 – February 2023
<ul style="list-style-type: none">• Developed software verification system incl. data ingestion and integrations with different logging processors and CI/CD pipelines, processing pipeline with ML models in its core, and visualization• Developed system-agnostic NLP model for anomaly detection in application log data• Developed NLP model for code insertion recommending “where to log?”• Lead a team of engineers		

**Senior Researcher /
Postdoc**

Technische Universität Berlin

April 2021 –
March 2023

- Lead a team of researchers
- Performed research and development on anomaly detection, distributed systems reliability, and learning from heterogeneous data
- Worked on ML projects funded from Huawei, Berlin Big Data Center, and BIFOLD
- Responsible for teaching of various seminars and projects

Research Associate

Technische Universität Berlin

October 2017 –
present

- Worked on artificial intelligence for software systems engineering and operation
- Researched and developed new anomaly detection methods that relate machine learning with software system data to support various software engineering, troubleshooting, and maintenance tasks.

Skills

Programming languages and frameworks

- Python, PyTorch, Python Analytics Stack, MLFlow, Kafka, Pyspark, Airflow, Spring Boot with Kotlin, Relational and NoSQL Databases, A/B testing, Docker

Languages

- English (full professional proficiency), Macedonian (native), German (A2), Serbo-Croatian (professional proficiency), Spanish (limited working proficiency)

Research highlights

Competitions

- Kaggle Quora Question Pairs (May 2017) – **Gold medal, top 0.3%**. Developed complex ensemble of machine learning models (multiple deep learning and tree boosting methods)
- Kaggle Data Science Bowl 2017– Lung Cancer Detection (April 2017) – **Silver medal, top 4%**. Using thousands of high-resolution lung scans developed ensemble of deep learning models that determine when lesions in the lungs are cancerous
- Kaggle Bosch Production Line Performance (November 2016) – **Silver medal, top 3.6%**. Developed solution using ensembles and gradient boosting
- Kaggle Predicting Red Hat Business Value (September 2016) – **Silver medal, top 1.6%**. Solution using ensembles and gradient boosting.
